Divya

These are some of the quotes where you can get enclosed GMP type machines similar to our Stokes BB2's. These machines are manufactured by Manesty of England. There are no painted surfaces exposed and they can be moved from one room which is Bharat's requirement. There is also a quotation for Ohara coating pan which can be used for R&D bio batches as well as some production batches that can not be coated in 48" AccelaCota coater. Bochang capsule machine is for information purpose only.

Let us have discussion about this.

Ashok
